

God, The Science, The Evidence

Book Discussion Guide

Thank you for reading **God, The Science, The Evidence**.

“Does God Exist?” is perhaps the oldest question on Earth. We wrote this book to reframe this for modern times – what if God’s existence wasn’t a matter of belief, but of evidence? We believe we are in the midst of a Great Reversal of Science. For centuries science seemed to push us away from the divine and materialism was ascendant.

In our book, you hear from real scientists who are now recognizing the limits of what science alone can explain. They are open to the idea that there is something else, beyond human understanding – **a creator God** – that must exist.

We are grateful so many readers (450,000 and counting) have opened their minds by opening this book. We don’t have all the answers, but we hope this book gets us a lot closer to the truth.

With gratitude,
Michel-Yves Bolloré and Olivier Bonnassies
Authors, **God, The Science, The Evidence**

QUESTIONS TO GUIDE YOUR EXPLORATION

1. The Central Premise: Is Belief a Matter of Evidence?

- *What do you think about the book’s central claim that the existence of God could be supported by scientific evidence?*
- *Does this shift your view of how faith and science can interact—or are they still fundamentally different ways of knowing?*

2. The “Great Reversal” of Science

- *The authors argue that science, once a challenge to belief, is now swinging back toward God. Do you find this idea compelling or problematic?*
- *Have you noticed a difference in how scientists (or people in general) talk about belief today compared to 20–30 years ago?*

3. Fine-Tuning and the Improbable Universe

- *Which scientific discovery or idea presented in the book did you find most surprising?*
- *Do you find the fine-tuning argument persuasive? Why or why not?*

- *If the universe seems fine-tuned for life, what explanations seem most plausible to you—chance, necessity, design?*

5. Personal Reactions and Reflections

- *Did this book confirm or challenge any of your existing beliefs—about God, science, or meaning?*
- *Have you ever wrestled with reconciling your worldview (religious or secular) with scientific understanding?*

6. Science and Spirituality Today

- *Why do you think there's growing interest among young people in spirituality, even as trust in institutions declines?*
- *Do you think it's possible for a scientist to be a person of faith without compromising intellectual integrity?*

7. The Scientists Behind the Ideas

- *Were you surprised to learn how many Nobel Prize winners or prominent scientists hold religious or metaphysical beliefs?*
- *Do you think public perception of scientists reflects this complexity—or leans too heavily toward one stereotype (atheist/materialist)?*

8. Faith, Evidence, and Public Discourse

- *How should conversations about science and faith take place in public life—in schools, media, politics?*
- *Does a book like this help bridge understanding or deepen divides? Why?*
